Math 1231 Practice Midterm

Instructor: Jay Daigle

- 1. These are the instructions you will see on the real test, next week. I include them here so you know what to expect.
- 2. You will have 75 minutes for this test.
- 3. You are not allowed to consult books or notes during the test, but you may use a one-page, one-sided, handwritten cheat sheet you have made for yourself ahead of time.
- 4. You may use a calculator, but don't use a graphing calculator or anything else that can do symbolic computations. Using a calculator for basic arithmetic is fine.
- 5. This test has eight questions, over five pages. You should not answer all eight questions.
 - (a) The first two problems are two pages, representing topics M1 and M2. You should do both of them, and they are worth 20 points each.
 - (b) The remaining six problems represent topics S1 through S6. You will be graded on your best four, with a few possible bonus points if you also do well on the other two.
 - (c) Doing four secondary topics well is much better than doing six poorly.
 - (d) If you perform well on a question on this test it will update your mastery scores. Achieving a 18/20 on a major topic or 9/10 on a secondary topic will count as getting a 2 on a mastery quiz.

Name:

Recitation Section:

Problem 1 (M1). Compute the following using methods we have learned in class. Show enough work to justify your answers.

(a) Find the tangent line to $h(x) = \arcsin(e^x)$ at $\ln(1/2)$.

(b)
$$\int_{1}^{2} \frac{e^{1/x}}{x^2} dx =$$

(c)
$$\int \frac{\cos(x)\sin(x)}{1+\cos^4(x)} \, dx =$$

Problem 2 (M2). Compute the following integrals using methods we have learned in class. Show enough work to justify your answers.

(a)
$$\int \frac{2x+1}{\sqrt{x^2-1}} \, dx$$

(b)
$$\int x \sec^2 x \, dx$$

(c)
$$\int_0^1 \frac{3x^2 - 6x + 1}{(x^2 - x - 1)(x - 2)} dx$$

Problem 3 (S1). Let $f(x) = \sqrt[3]{x^5 + x^4 + x^3 + x^2 + 2x}$. Find $(f^{-1})'(4)$.

Problem 4 (S2). Find $\lim_{x\to 0} \frac{2\sin(x)-\sin(2x)}{x-\sin(x)}$.

Problem 5 (S3).

Use Simpson's rule and six intervals to estimate $\int_0^6 x^4 dx$.

Problem 6 (S4). Does $\int_0^\infty \frac{x}{x^3+1} dx$ converge or diverge? Why?

Problem 7 (S5).

Find the surface area of the surface obtained by rotating $y = \sqrt{5+4x}$ for $-1 \le x \le 1$ about the x-axis.

Problem 8 (S6). Find a (specific) solution to the initial value problem y'/x - y = 1 if y(0) = 3
